

Youthpro - Intensive Liposome set

Stock: In Stock

Call for Price: 051 447 5571

Description

Optimal protection with long-term effect: The negatively ionized Intensive Liposome Shot provides a balanced protective complex against the environmental aging of the skin. It has a high Radical Protection Factor and transports the antioxidants A, C and E into the skin layers. Due to the encapsulation in the carrier system, the vitamins contained are effectively stabilized and reach deeper skin layers, which leads to an increase in their bioavailability there. The delivery takes place in a 3er-sorting in folding box.
